

Enamelled steel

At GALA, the experience and accuracy in the research processes of materials such as steel have allowed the production of baths that withstand temperature changes with a high harshness, being resistant to the common scratches of the bath accesories and to chemical agents, such as acids and colourings.

VANESA
Steel bath 170x75
REF: 67370

The Vanesa bath, manufactured in steel and with a 5-year warranty, has a very functional design.

PRODUCT INFORMATION

Features

Vanesa 170 x 75 x 42 cm. / 60 kg. / 10 units pallet. Chromed handles. Sound insulated. Anti-slip. Capacity 220 l.

Useful information

Our wide experience in working with steel has allowed us to improve the steel-making process thus meeting the needs of our customers, offering products in 2.5 mm vitrified steel. Gala baths and shower trays meet the stringent UNE-EN 141516:2006 European standards 2006 that ensure a high level of hardness (6-7 on the Mohs Scale of mineral hardness). This prevents the product from being scratched by every day bathroom items. They are also highly resistant to chemicals such as acids and/or dyes and to temperature changes. They are also fade-resistant and age-resistant. Another definitive feature of our products is the colours we use. Since these colours are of the same chromatic variety as the other ceramic items in our catalogue, our customers can easily combine various products with matching colours.

Guarantee

Gala products are guaranteed against any manufacturing defects, from the date of purchase of the product, only if the installation has been carried out in accordance with Gala´s installation instructions and, applying the current legislation on electrical and sanitary appliances, by authorised staff. The guarantee period for steel baths is of 5 years.

Please check our product installation manuals.

Certificates

High quality is a constant at Gala in order to guarantee the technical and aesthetic features as well as the performance of our products. Please check our product quality certificates.

Maintenance

Cleaning of the bath should be carried out using a soft sponge, soap and water. After cleaning, the bath should be dried so as to prevent limescale forming. No abrasive products, solvents or objects that could damage the bath surface should be used. We recommend a certain care with some highly concentrated detergents and cleaning products.
